

# Download Innovations In Urologic Surgery

Latest Innovations In Urologic Surgery Building on an already robust minimally invasive surgery program at BMC, the da Vinci® Surgical System provides surgeons with an alternative to both traditional open surgery and conventional laparoscopy, putting the surgeon's hands at the controls of a state-of-the-art robotic platform. About Innovations in Urologic Practice. Innovations in Urologic Practice (IUP) is an annual CME-accredited conference devoted to updating urologists on the rapidly changing healthcare environment. Topics focus on innovative diagnostic and treatment strategies, controversies, new and currently developing technologies, and challenges in today's urologic practice. The rapidly changing healthcare environment and pace of technological innovations in medicine require urologists, oncologists, and other healthcare providers to keep abreast of state-of-the-art diagnosis and management of urologic disease. Learning Objectives At the conclusion of the activity, participants should be able to: 1. Urologic surgery continues to be at the forefront of the revolution of robotic surgery with advancements in existing technology not only in the areas of simulation training, single-site surgery, complex urologic reconstruction, and oncology but also in the creation of entirely novel surgical systems.
